RESUME

COVER LETTER

Dear Hiring Manager,

Running and Software Engineering are more similar than different in the sense that the longer, more diligent, and intelligent you work, the better you become. I believe that to be a good Software Engineer, creativity, and unwavering persistence is just as important as intelligence. As a former captain of my high school track team, the greatest factors that went into choosing new captain by the coaching staff were the athlete's times, dedication, and the way the athlete carries themselves as a representative of the organization both on and off the track. I believe my experiences have prepared me for this role as I developed and lead team summer practices as well as became a self-taught programmer before I began college. I am currently a Computer Science undergraduate student at Rutgers University and am writing to express my interest in the Software Engineering Intern position at Zocdoc.

Currently, I am a Web Developer Intern at a digital agency for almost year and a half where I work on the development and WordPress applications using PHP, Javascript, HTML5, and CSS. My strongest and preferred programming language is Ruby, which I use for the majority of my projects, and build with frameworks, not limited to, Sinatra and Ruby on Rails. My current project is a web scraper made with Ruby, or maybe ill transfer it into golang later as a learning experience, for an unofficial API of a popular website because the current one is extremely limited so I decided to make one myself. I hold a 3.5 GPA and spend whatever time I can, outside of school and work, on my side projects. I have examples of my school work and side projects publicly available on my GitHub account. I look forward to contributing my skills, experiences, and ingenuity to the Software Engineering Intern position at Zocdoc. Thank you for your time and consideration.

Respectfully,

BERNIN A. UBEN
